Screening for Breast Cancer: Systematic Evidence Review Update for the U.S. Preventive Services Task Force: Evidence Review Update Number 74

By U. S. Department of Health and Human Services

Createspace. Paperback. Condition: New. This item is printed on demand. 96 pages. Dimensions: 11.0in. x 8.5in. x 0.2in. Breast cancer is a proliferation of malignant cells that arises in the breast tissue, specifically in the terminal ductal-lobular unit. The term breast cancer represents a continuum of disease, ranging from noninvasive to invasive carcinoma. Screening techniques may detect any of these disease entities as well as noncancerous lesions such as benign breast cysts. This systematic evidence review is prepared for the U. S. Preventive Services Task Force (USPSTF) to update its previous recommendation on breast cancer screening for average-risk women. 1 In 2002, based on results of a systematic evidence review, the USPSTF recommended screening mammography, with or without clinical breast examination (CBE), every 1-2 years for women age 40 years and older. The USPSTF concluded that the evidence was insufficient to recommend for or against routine CBE alone to screen for breast cancer. The USPSTF also concluded that the evidence was insufficient to recommend for or against teaching or performing routine breast self examination (BSE). Breast cancer is the most frequently diagnosed non-cutaneous cancer and the second leading cause of cancer deaths after lung cancer among women in the United States....
