AND MUCH MORE I imagined the situation of a mass falling towards the singularity point in a blackhole singularity in electrodynamic gravity conditions for some relative structures in the electromagnetic theory which is the most important and understandable theory in the classical physics I had comprehensive knowledge in my last years of my undergraduate term of the academic life (in about 2000) in an article of Faraday on the topic of the law of induction I had incidentally seen while I was examining the existing physics literature in the faculty's library. I wondered if the law of induction in a circular conducting wire differently perceived according to an observer in the train and the one on the land in the special relativity of Einstein may occur by the increase and decrease of mass during the course of falling to singularity in this blackhole and may create an electromagnetic gravity wave and a magnetic charge current which would decrease the impact of gravitation in parallel to this. This oriented me to a series of researches to study and create this theory for years and then directed me to create a unified electromagnetic gravity theory...
